

SHRUTHI SUNDAR

Technical Product Manager | Platform Modernization • Data Architecture • Risk & Compliance

Bengaluru | 7358325784 | shruthi2k0@gmail.com | linkedin.com/in/shruthi1812

PROFESSIONAL SUMMARY

Technical Product Manager with 4+ years owning both the roadmap and the build for enterprise risk and compliance platforms. Sits at the intersection of product and engineering — translates ambiguous business and regulatory requirements into technical specs, makes and defends trade-off calls with engineering teams as a credible technical peer, and has personally built the systems being scoped. Led a legacy-to-modern platform migration and a unified data layer initiative from roadmap through implementation, aligning Product, Technology, and Compliance stakeholders throughout. Uses AI-assisted workflows (GitHub Copilot, Claude Code) daily to move faster without cutting corners.

EXPERIENCE

Technical Product Manager | Morgan Stanley Advantage ServicesJan 2025 – Present

- Own the product roadmap for a Unified Data Layer initiative, consolidating multi-terabyte, fragmented data sources into a single high-throughput platform for analytics and risk computations across distributed systems.
- Leading a legacy-to-modern platform migration end to end — scoping the technical approach, sequencing delivery across a 180-module program, and personally architecting 2 of the highest-priority modules from legacy logic through modern-stack implementation.
- Ran rapid build-feedback loops directly with end users to validate technical requirements before formal build-out, closing the gap between what was asked for and what actually needed to be built.
- Set technical scope and roadmap priorities jointly with business and risk stakeholders, converting regulatory requirements into an execution plan engineering could commit to.
- Managed stakeholder relationships and delivery alignment across US, EMEA, and Hong Kong teams — coordinating priorities, timelines, and trade-off decisions across time zones and regional regulatory contexts.
- Regularly communicate platform capability progress, value, and adoption to senior leadership and partner teams as part of standing governance cadence.

Product & Engineering (P2 / P3) | Morgan Stanley Advantage ServicesAug 2022 – Jan 2025

- Took ownership of a stalled, business-critical compliance product after two prior leads exited — defined the technical spec from scratch with treasury and compliance stakeholders and personally built and shipped it to production.
- Identified a million dollar gap in liquidity reporting that had gone unnoticed by tracing a routine-looking output back to its technical source, and escalated it directly to MD-level leadership as a critical compliance risk.
- Defined technical requirements and acceptance criteria across multiple regulatory reporting products, working directly with compliance and finance stakeholders to ensure what shipped matched what the business needed.
- Facilitated recurring cross-functional working sessions across upstream and downstream teams for over a year to manage complex dependencies — documenting decisions and driving action items to closure.
- Owned and built recurring reporting dashboards and executive-ready decks for senior management, giving leadership ongoing visibility into liquidity movement and platform health.

CORE SKILLS

- **Product & Roadmap:** Roadmap ownership, requirements gathering, user stories, acceptance criteria, backlog prioritization, cross-functional working session facilitation, Agile/SAFe, Jira (daily use, 4+ years)
- **Technical Depth:** Java, Python,, SQL, Azure, distributed systems, data architecture, API and system integration patterns
- **Data & Platforms:** Snowflake, Databricks, Microsoft Azure, Power BI (executive dashboarding & reporting), data mapping, data migration, platform modernization
- **Risk & Compliance Domain:** Financial regulatory reporting, liquidity risk, RBI-standard compliance workflows, audit trail design
- **Stakeholder Management:** Cross-functional alignment across business, risk, compliance, data, and engineering; MD-level communication; multi-region coordination across US, EMEA, and Hong Kong

TECHNICAL PRODUCT HIGHLIGHTS

- **Own the roadmap and the build:** Defined the product roadmap for a legacy-to-modern platform migration and personally architected 2 of its highest-priority modules end-to-end, eliminating translation loss between product intent and engineering execution.
- **Technical trade-off ownership:** Architected a high-throughput unified data layer consolidating multi-terabyte datasets, making the underlying trade-off calls on architecture and access patterns to enable low-latency analytics and risk computations.
- **Specs from ambiguity:** Took ownership of a stalled compliance initiative with no formal specification after two prior leads departed — defined the product and technical spec directly with treasury and compliance stakeholders and shipped it to production.
- **Technical risk identification:** Traced a routine-looking data output back to its source, surfacing a major liquidity underreporting gap, and escalated it directly to MD-level stakeholders as the sole technical and product point of contact.

EDUCATION & RECOGNITIONS

- **B.E. Computer Science** — College of Engineering Guindy, Chennai, Jun 2022
- **Morgan Stanley Award for Exceptional Delivery** — Q3 2024
